# DISCUSSION

- CONTAINERS
- DOCKER
- WINDOWS & HYPER-V CONTAINERS
- AZURE CONTAINERS
- DEMOS

WHO MANAGES CONTAINERS? WITH WHAT?

WHERE DOES NANOSERVER FIT?

WHAT IS DOCKER?

IS IT ONLY ABOUT DEVOPS?

WHAT ARE MICROSERVICES?

WHAT ABOUT POWERSHELL?

WHAT'S THE DIFFERENCE BETWEEN WINDOWS  
CONTAINERS & HYPER-V CONTAINERS?

HOW DOES THIS AFFECT ME & MY CAREER?

WHY WOULD YOU USE CONTAINERS?

WHERE CAN CONTAINERS BE RUN?

WHAT APPS CAN RUN IN CONTAINERS?

# WHAT ARE CONTAINERS?

CONTAINERS ARE OPERATING  
SYSTEM-LEVEL VIRTUALIZATION.

CONTAINERS ENCAPSULATE  
APPLICATIONS INTO INDIVIDUAL  
ISOLATED ENVIRONMENTS ON A  
SHARED OPERATING SYSTEM WITH  
THEIR OWN PROCESSES,  
NETWORK, BINARIES, AND  
LIBRARIES.

1979  
CHROOT

WINDOWS /  
HYPER-V  
CONTAINERS  
& DOCKER  
FOR  
WINDOWS  
& MAC

# “IT IS ALL ABOUT THE APPLICATIONS.”

- WHY CONTAINERS:
  - ARE NOT JUST FOR DEVOPS ANYMORE!
  - REDUCE DEVELOPMENT “FRICTION”
  - “THROW-AWAY” COMPONENTS
  - DEPLOY REALLY, REALLY, REALLY FAST
  - DEV FRAMEWORKS ARE DIVERSE – “WORKS ON MY MACHINE”
  - ARE EXTREMELY COMPACT & LIGHTWEIGHT
  - DENSITY, DENSITY, AND MORE DENSITY
  - REUSABLE AND PORTABLE
  - HAVE AN “OPEN” STANDARD. WELL... KINDA.
  - MANAGEMENT IS SIMPLE, BUT MOSTLY CLI FOR NOW
  - HAVE A MASSIVE ECOSYSTEM – LIKE REALLY, REALLY BIG.

# WHAT IS DOCKER?

DOCKER IS AN OPEN PLATFORM CONTAINER TECHNOLOGY. IT IS A MANAGEMENT, API, HOST, AND PACKAGING PLATFORM FOR CONTAINERS.

DOCKER HAS A HUGE ECOSYSTEM OF APPLICATIONS & SERVICES THAT ALLOW FOR GROWTH, SCALE, RESILIENCY, AND REDUNDANCY.

NOT THE ONLY GAME IN TOWN ANYMORE...

**Rocket**

Windows Containers

# HYPERVISOR ARCHITECTURES

TYPE 1

TYPE 2

# VM vs Containers Architecture

**DENSITY**

**OS Cost**

# OPENING WINDOWS TO CONTAINERS

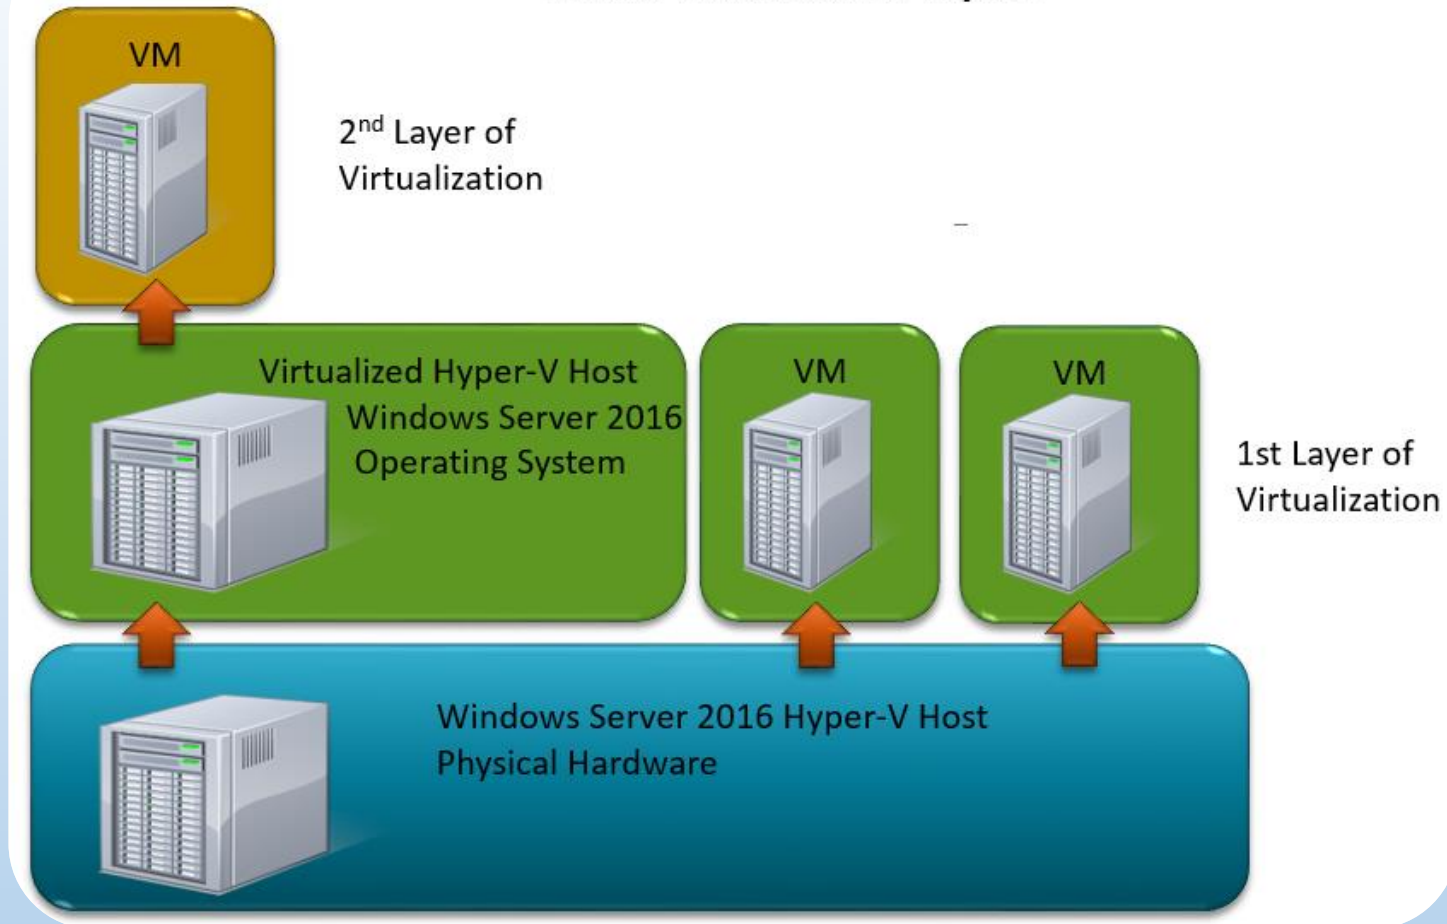

- DOCKER TOOLBOX (LEGACY)
- DOCKER FOR *WINDOWS & MAC*
  - BETA - REPLACES TOOLBOX
  - DOES NOT WORK WITH *WINDOWS CONTAINERS YET*
  - *BETA.DOCKER.COM*
- WINDOWS CONTAINERS
- HYPER-V CONTAINERS

# “WHAT ARE THE CORE DIFFERENCES BETWEEN WINDOWS CONTAINERS AND HYPER-V CONTAINERS?”

- TRUST
  - HYPER-V CONTAINERS - ISOLATION IS TIGHTER
  - WINDOWS CONTAINERS – OS TRUSTS THE APPS & APPS TRUST EACH OTHER
- DENSITY
  - HYPER-V CONTAINERS – NESTING
- PLATFORM
  - WINDOWS CONTAINERS DOES NOT REQUIRE HYPER-V

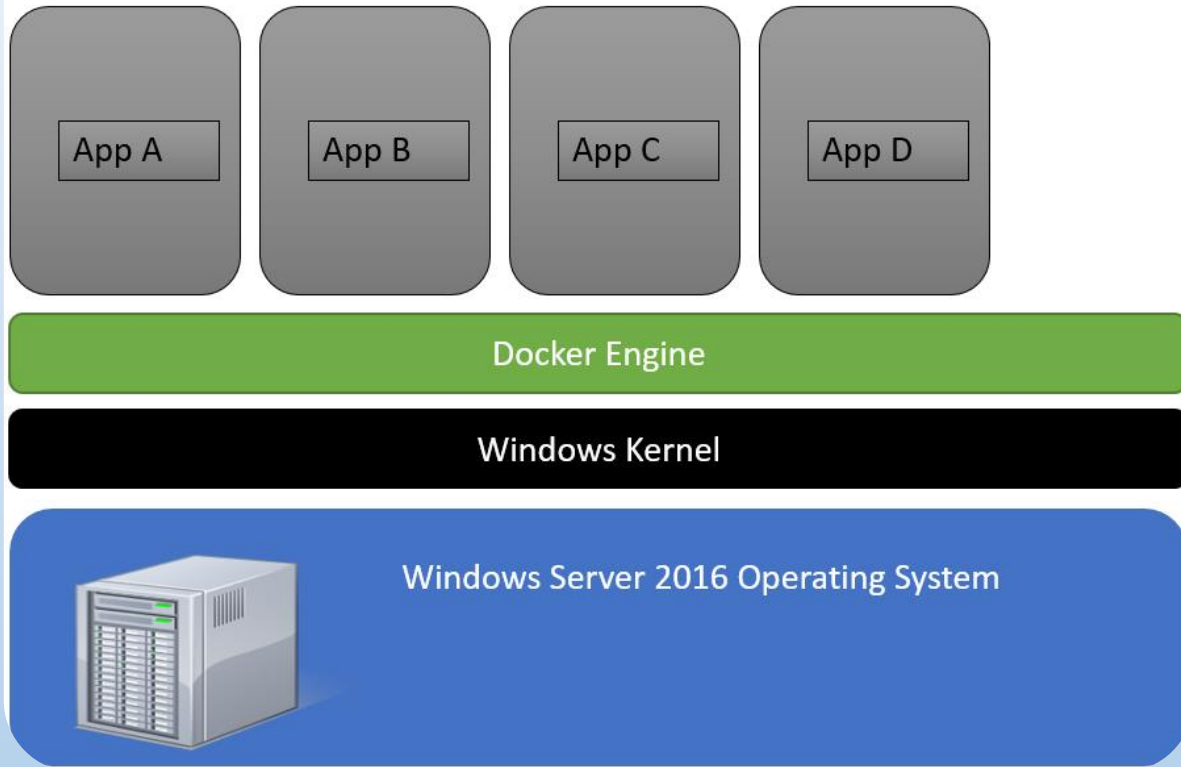

## Nested Virtualization Layout

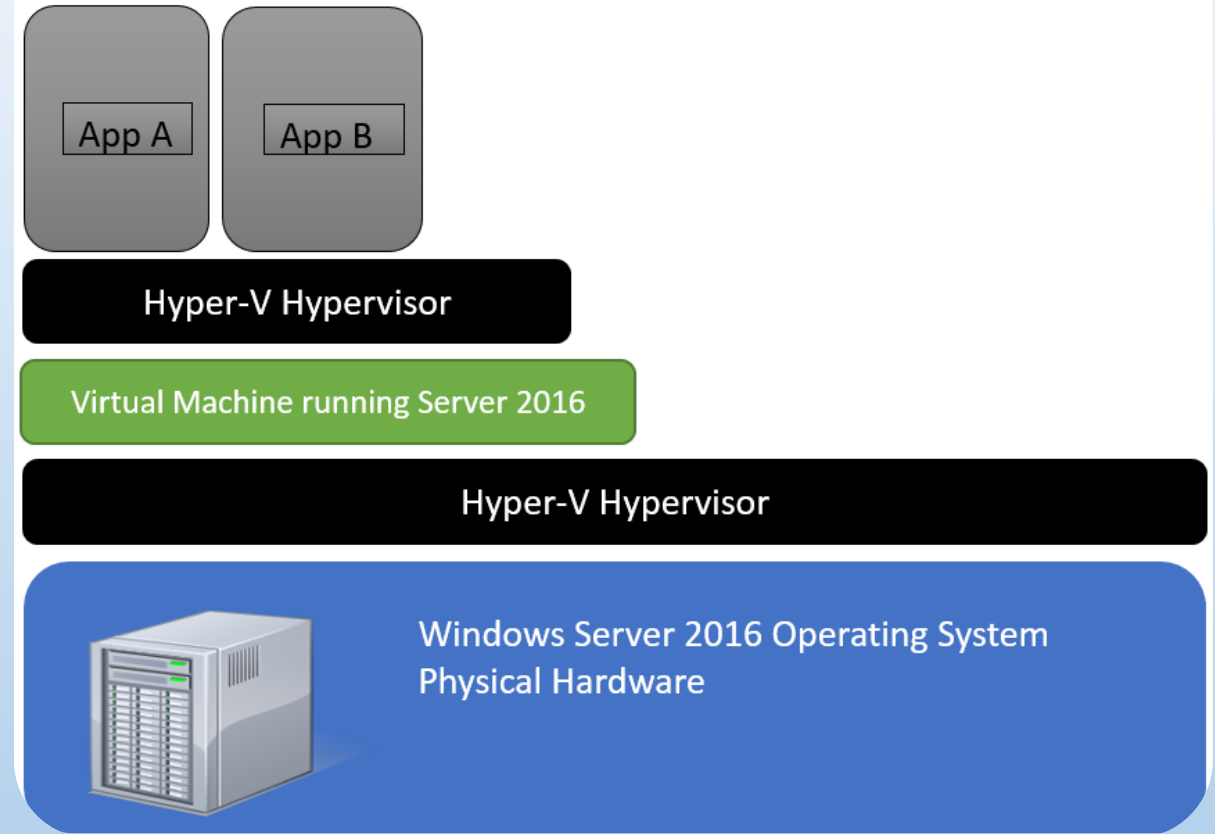

`Set-VMProcessor -VMName <Target VM's Name> -ExposeVirtualizationExtensions $true`

# MARKETING DIFFERENCE?

## Microsoft's Container Run-Times

### Windows Server Container

### Hyper-V Container

# 0.000.000.001

ONE BILLIONTH

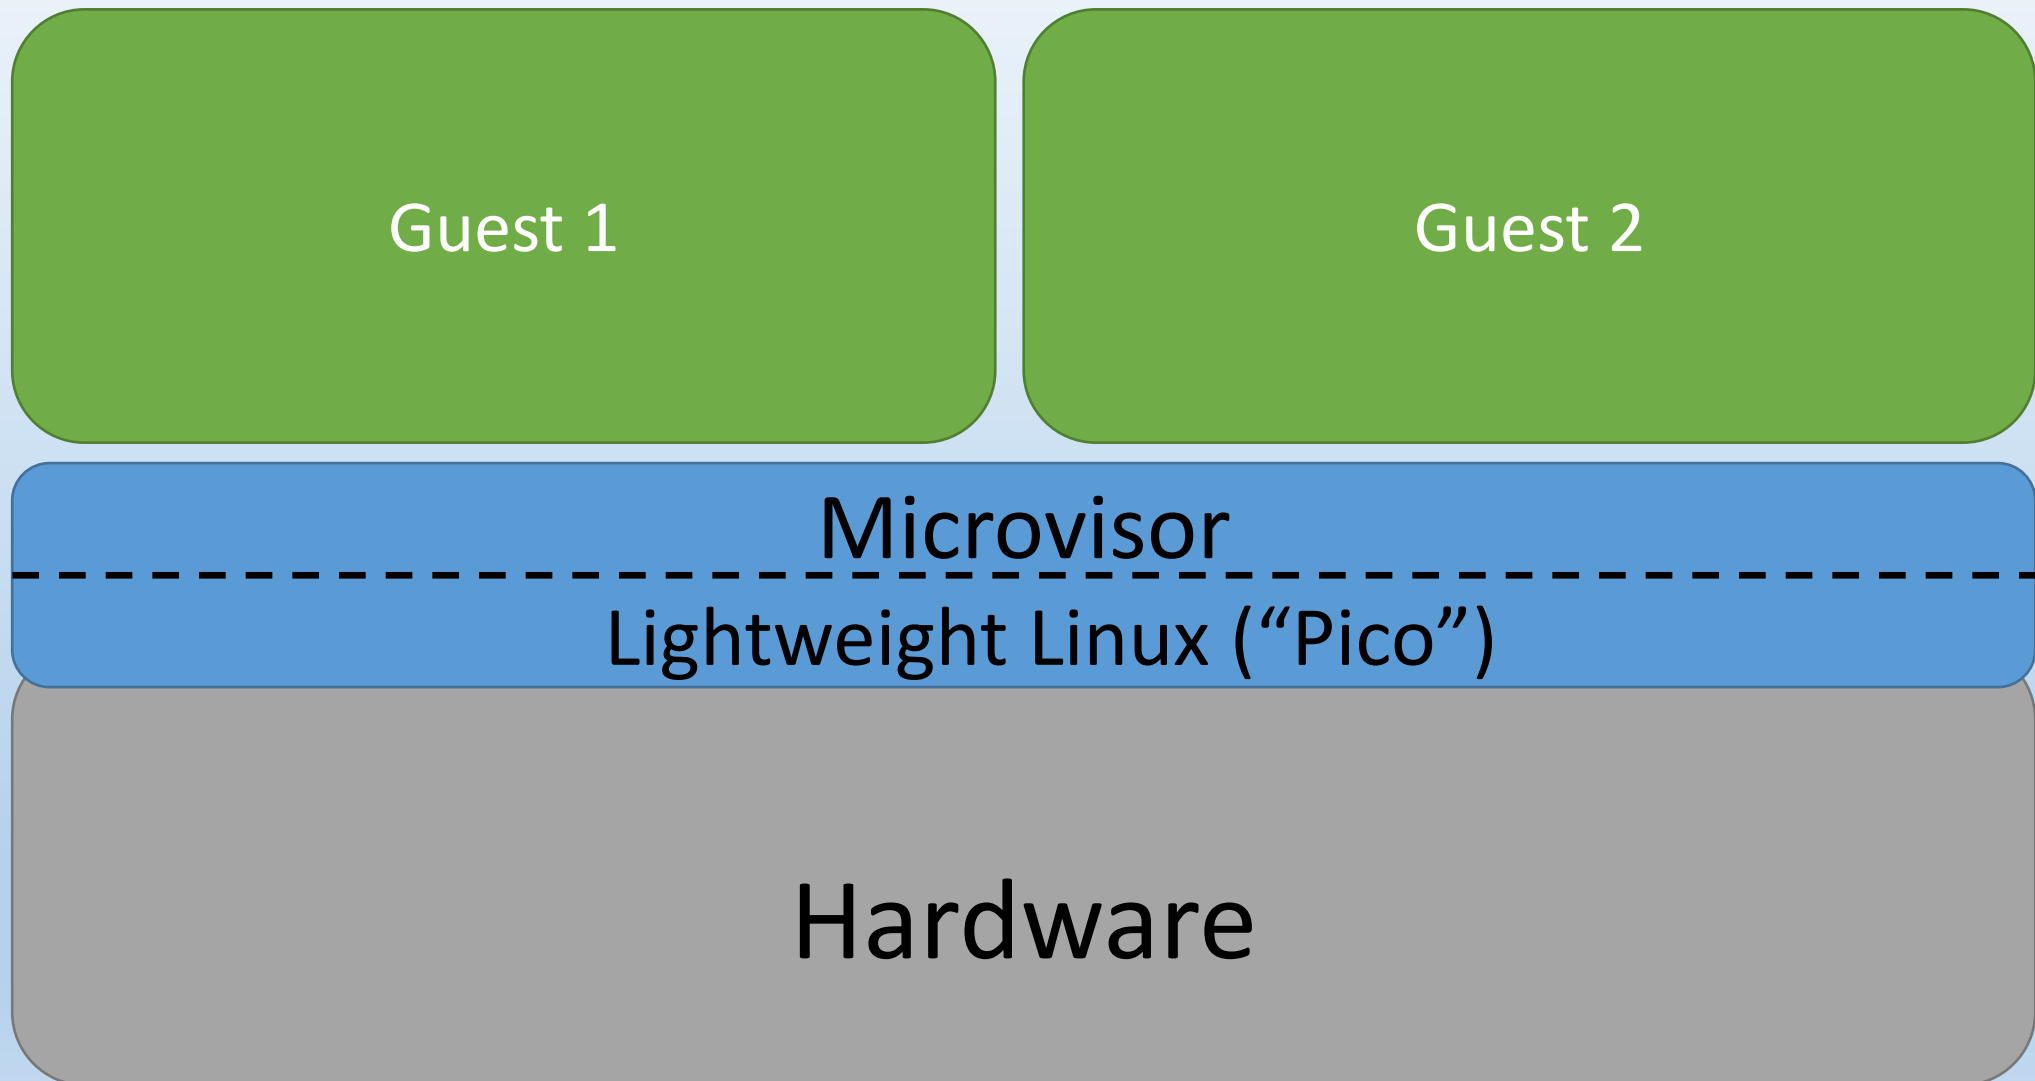

## Nano Server

Try it out – <http://aka.ms/nanoeval>

- NO LOGIN
- NO GUI
- NO RDP
- NO 32BIT SUPPORT
- NO MSI INSTALLER
- THE GOAL OF NANOSERVER WAS FOR AZURE & AZURE STACK
- NANOSERVER IS REFACTORED (I.E. RESTRUCTURED) WINDOWS SERVER CODE
- INSTALLATION IS VERY DIFFERENT
- THERE IS NO PATH FROM NANOSERVER TO CORE OR FULL

# MICROVISOR ARCHITECTURE

# AZURE CONTAINERS

- INSTALL MANUALLY ON SUPPORTED LINUX VM's
- DOCKER VM EXTENSION
- BUILT-IN TO WINDOWS SERVER 2016 TP
- MARKETPLACE
  - PRE-INSTALLED ON UBUNTU
  - MULTI-CONTAINER COMPOSED APPS (EG – WORDPRESS+MYSQL)
  - DOCKER TRUSTED REGISTRY, JENKINS, ETC.
- AZURE CONTAINER SERVICE

# AZURE CONTAINER SERVICE (CAAS)

- STREAMLINED PROVISIONING OF APACHE MESOS CLUSTERS
- VM SCALE SETS
- LAYERED SUPPORT OF SWARM, MARATHON, AND CHRONOS
- DOCKER TOOLING AND API SUPPORT
- INTEGRATED APP MANAGEMENT AND SCALING
- LINUX AND WINDOWS SERVER CONTAINERS
- PUBLIC AND PRIVATE CLOUD
