RDS 2019 and Windows Virtual Desktop

Windows Virtual Desktop ideal if you want...

- Microsoft to manage the brokering platform as a service
- Windows 10 Enterprise multi-session capabilities, free Windows 7 ESU
- Office365 ProPlus capabilities

RDS 2019 ideal if you want...

- full end-to-end control of the desktop virtualization environment
- in-place upgrade of existing Windows Server RDS environment
- to extend current deployments

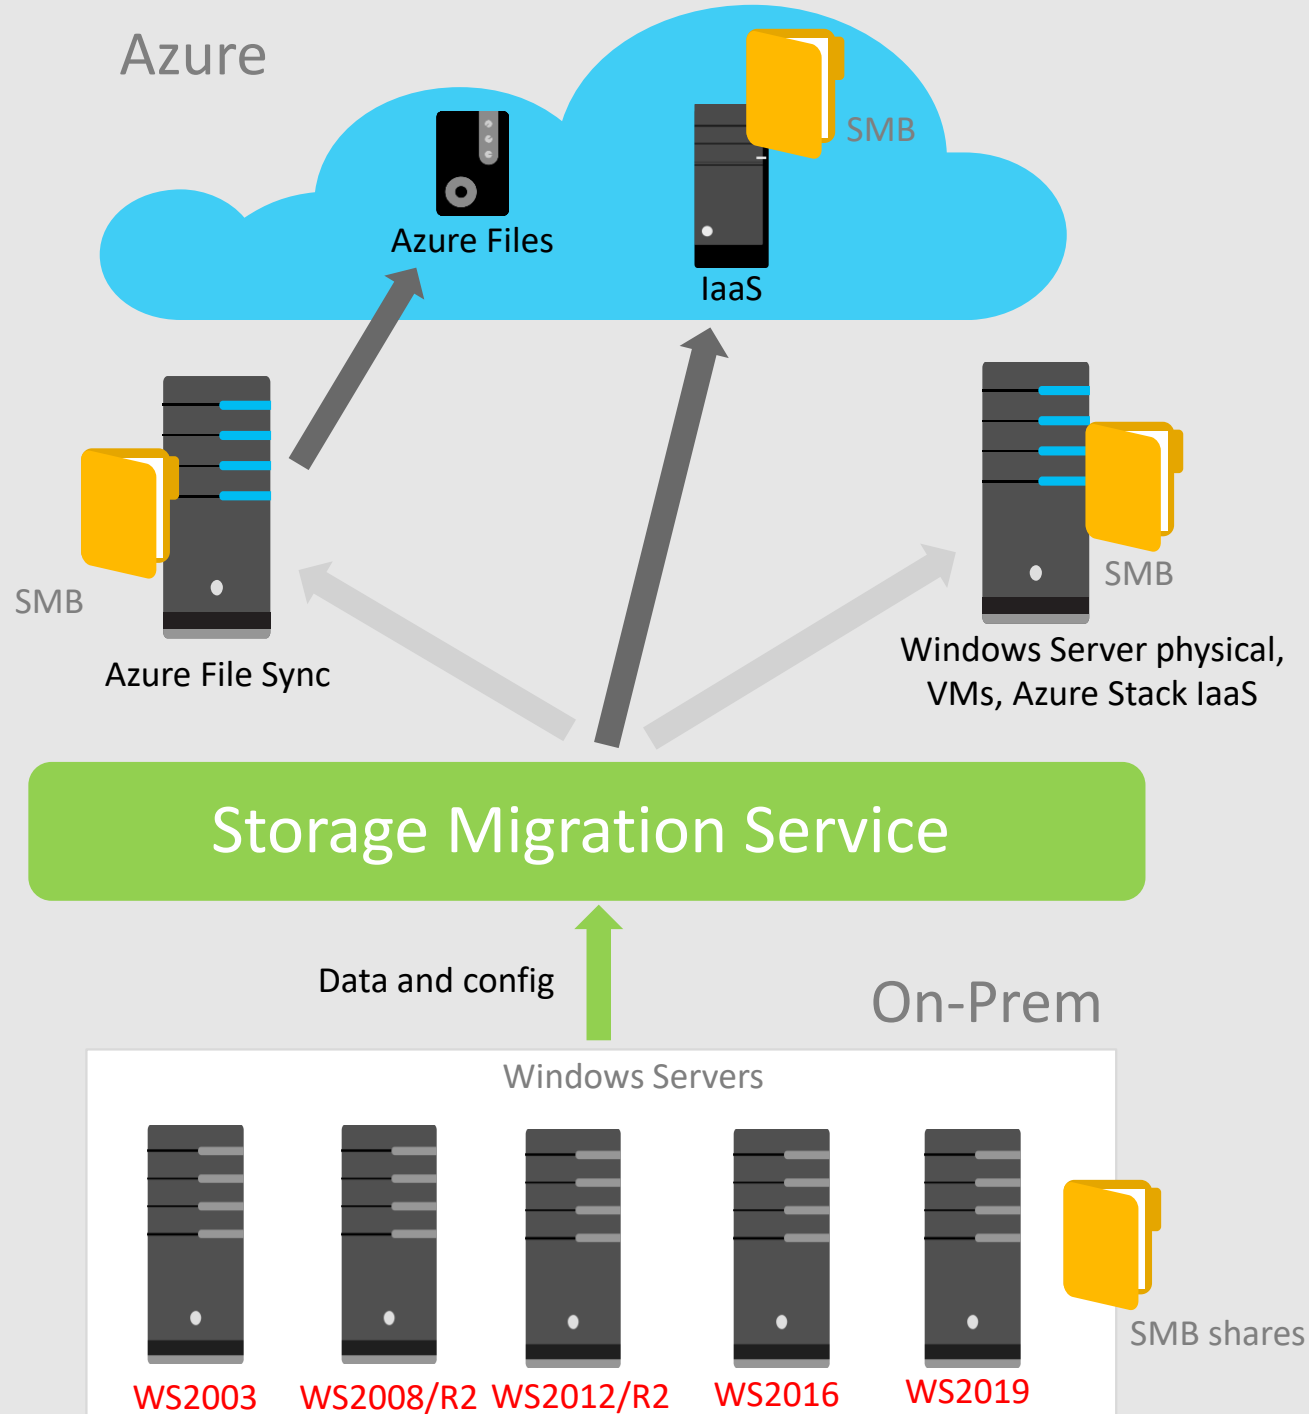

Storage Migration Service Vision

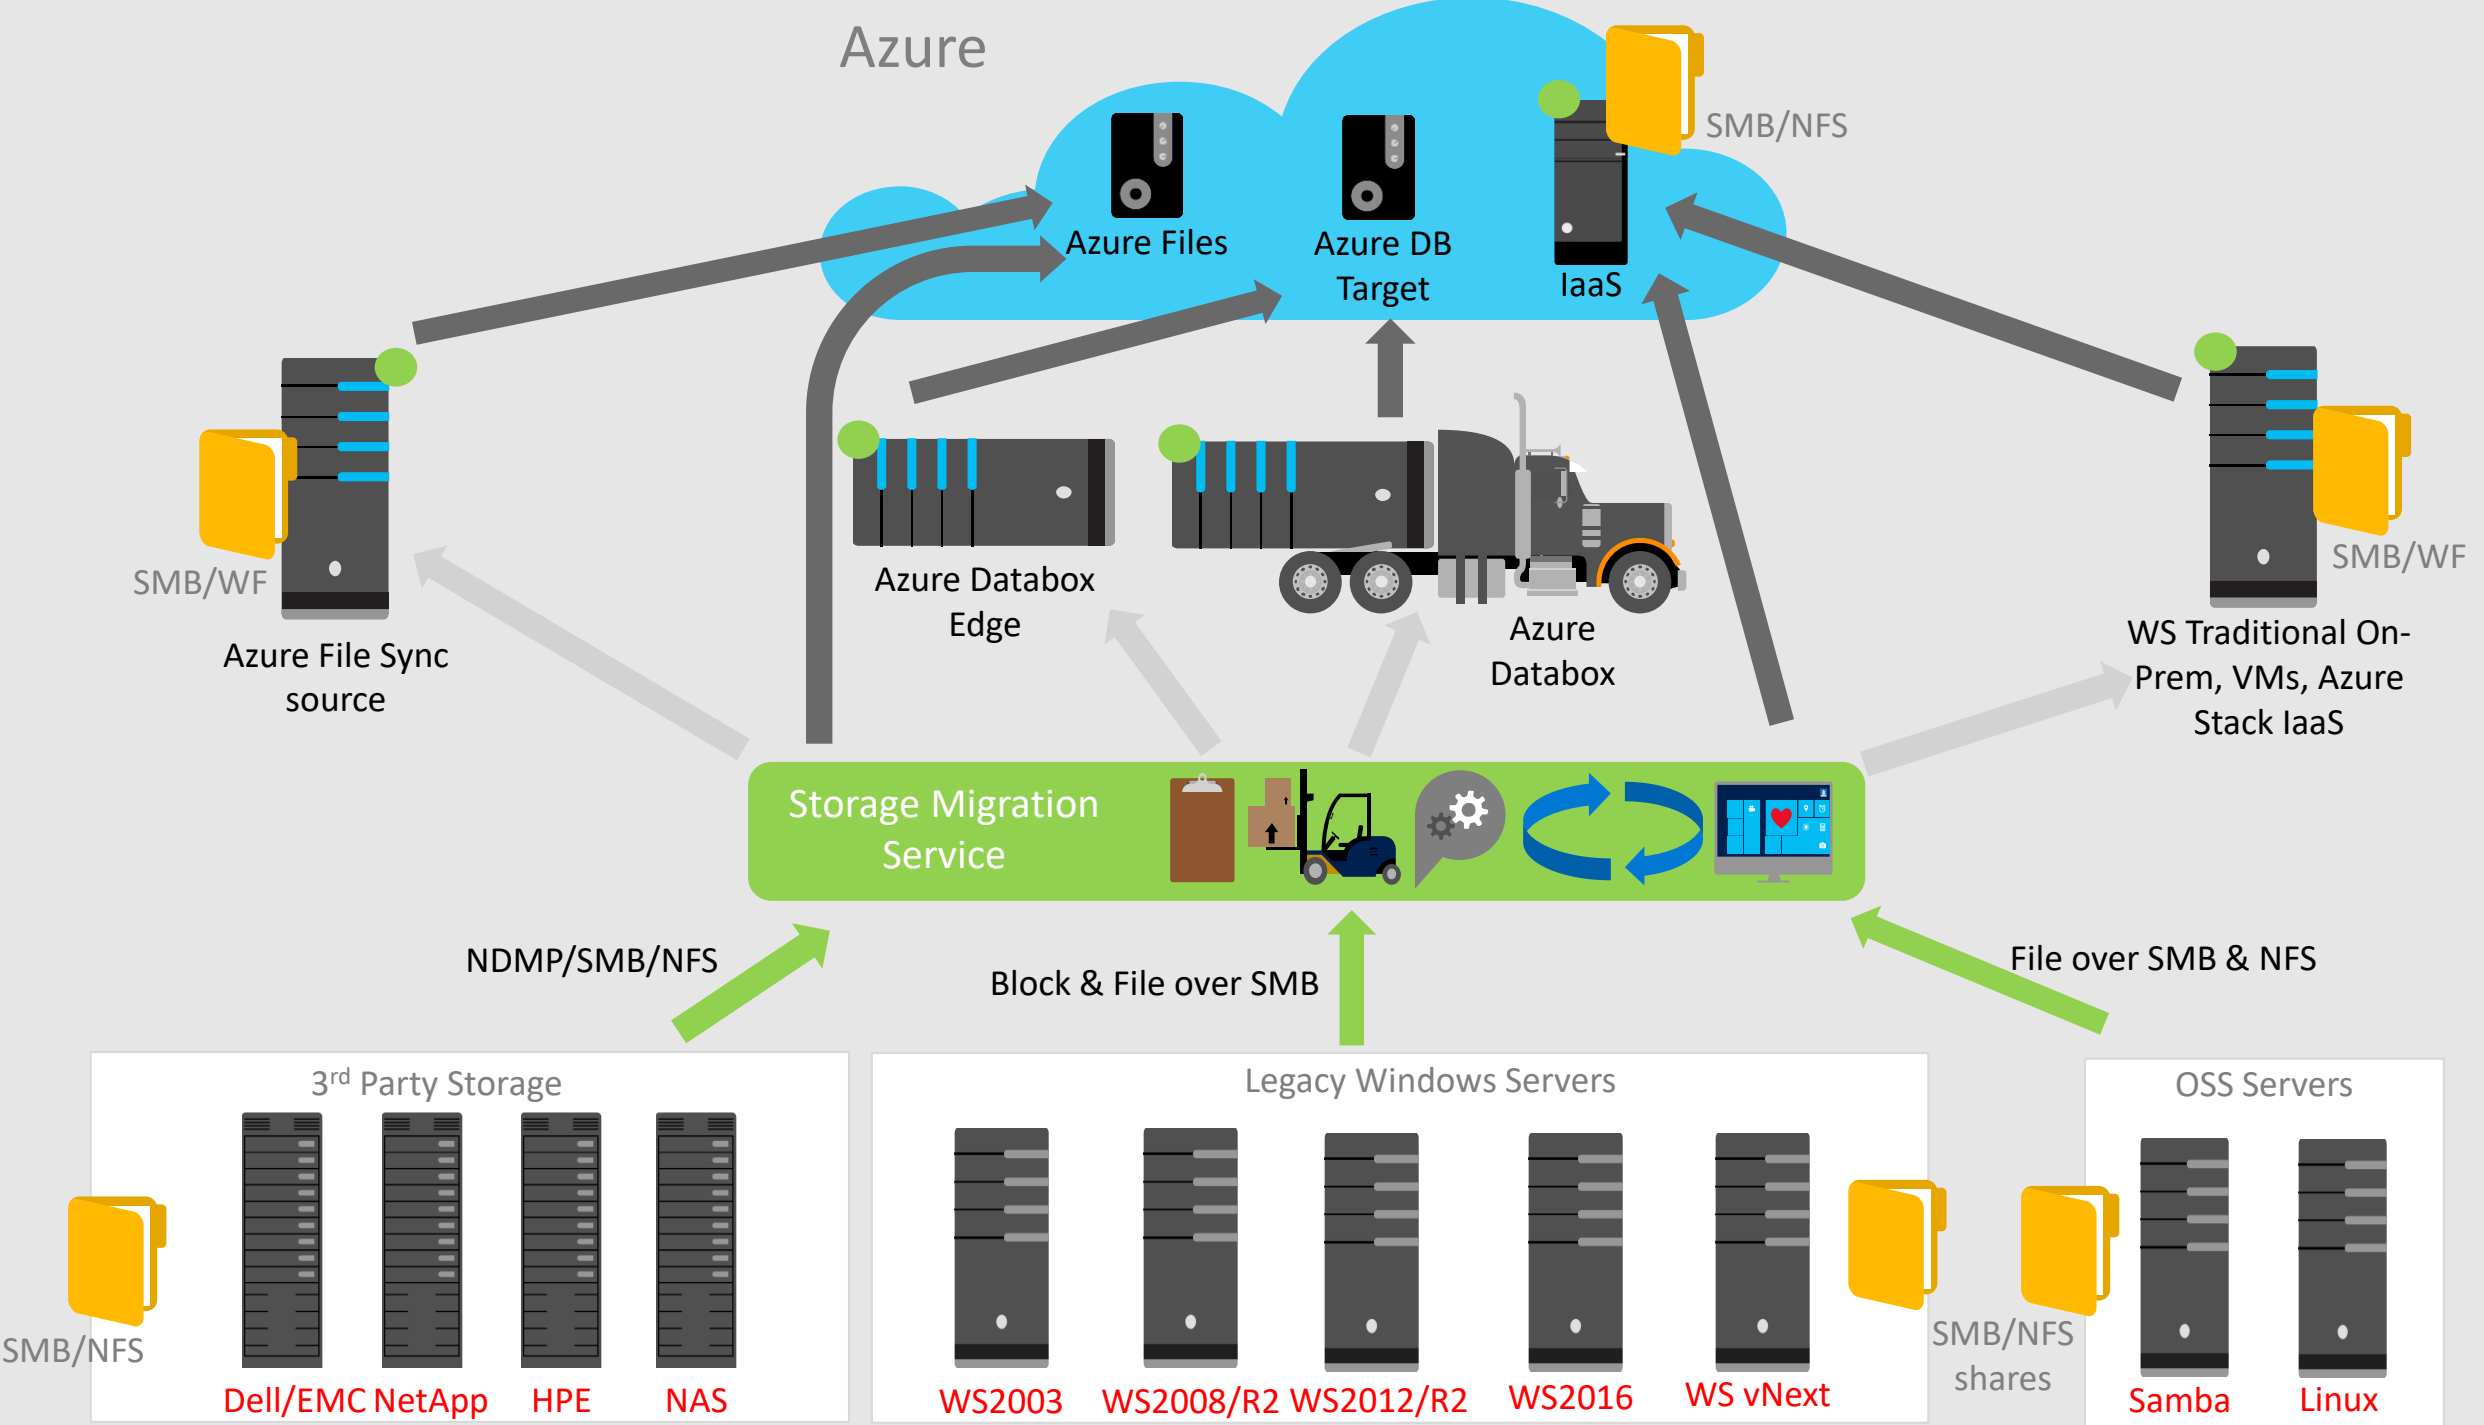

Migrate unstructured data from anywhere
into physical, virtual, and IaaS

Fast, consistent, scalable

Takes care of complexity

An elegant graphical workflow

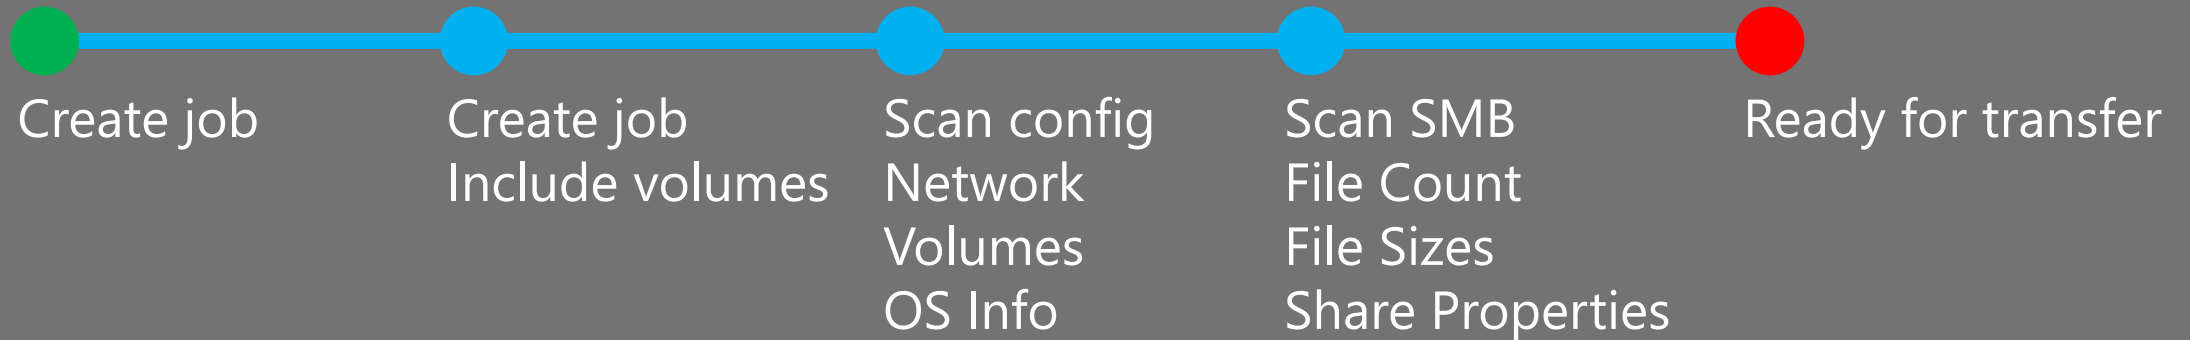

Inventory

Passive (no agent)

Run from WS2019 Orchestrator

Transfer

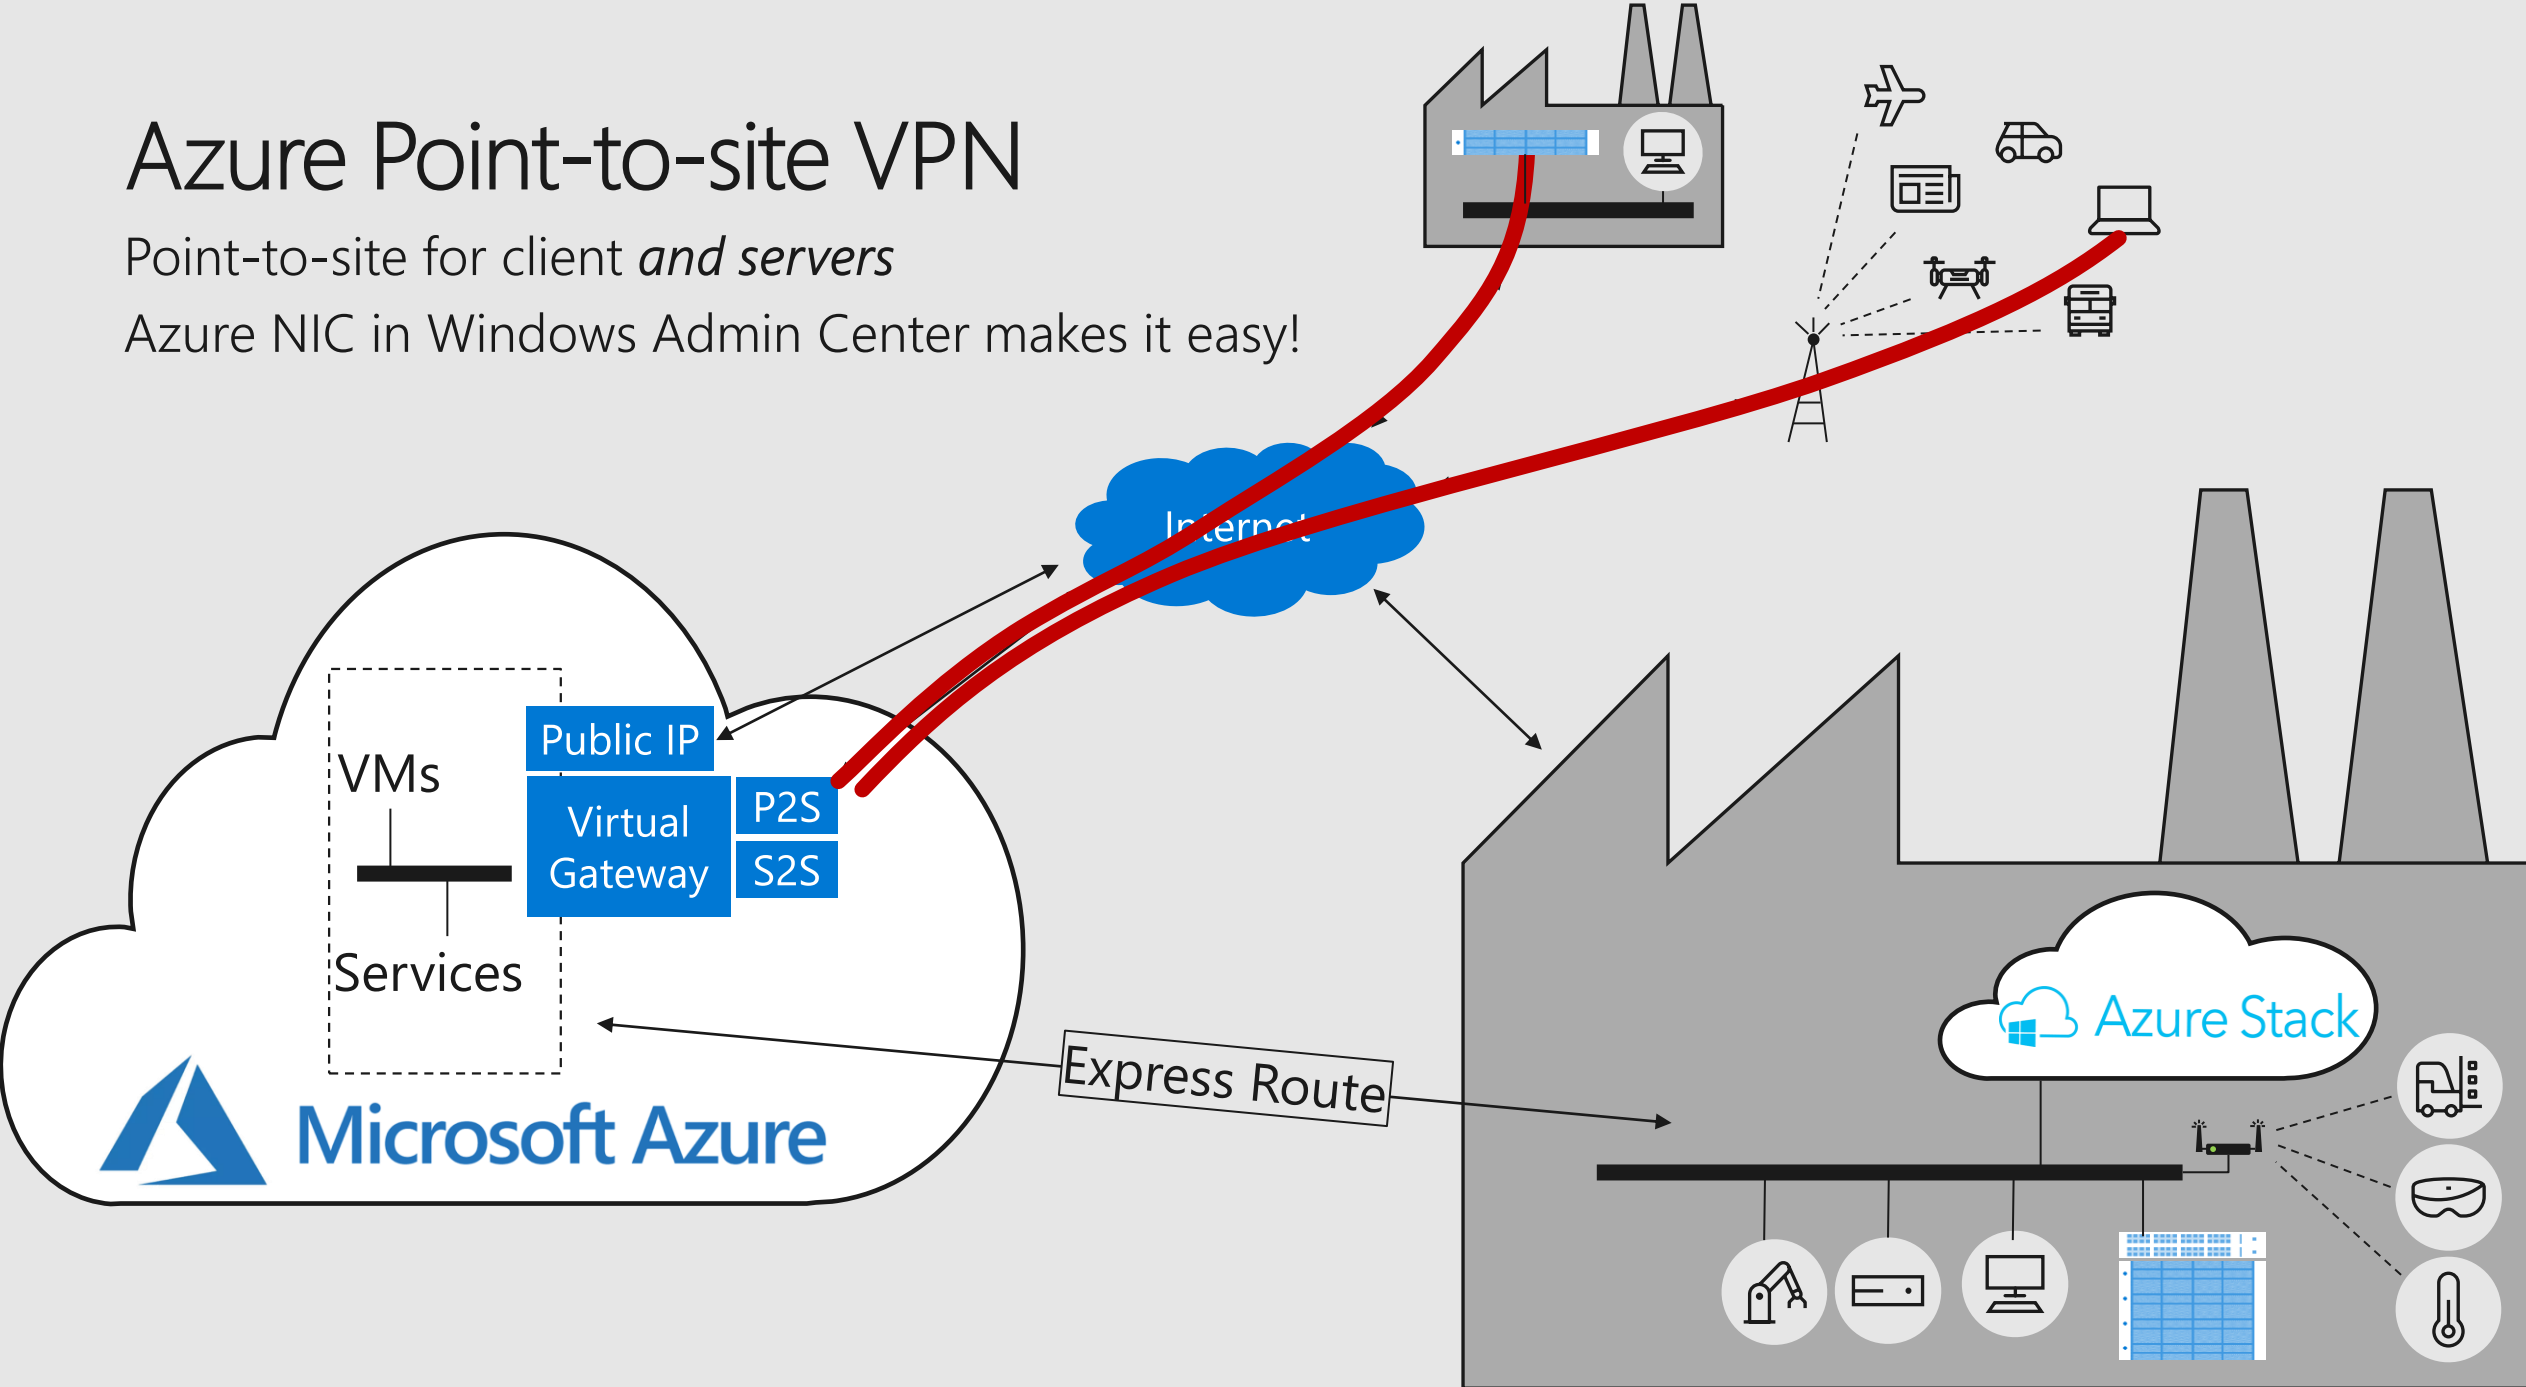

Cutover

Azure Point-to-site VPN

Point-to-site for client *and* servers

Azure NIC in Windows Admin Center makes it easy!

Azure Network Adapter in Windows Admin Center

Easy setup for your server to establish a Point-to-site connection to your Azure virtual network.

- Takes care of Azure Virtual Gateway creation
- Handles self-signed certificates, or user generated
- Auto-reconnect is enabled
- Connection is persistent when not logged in

How does Deduplication Work in Windows 2019

- #1 – Scans the Files system for files meeting the optimization policy

- #2 – Breaks the files into Variable Sized Chunks

How does Deduplication Work in Windows 2019

#3 – Identifies unique chunks

#4 – Places the files in the chunk store and optionally compresses

How does Deduplication Work in Windows 2019

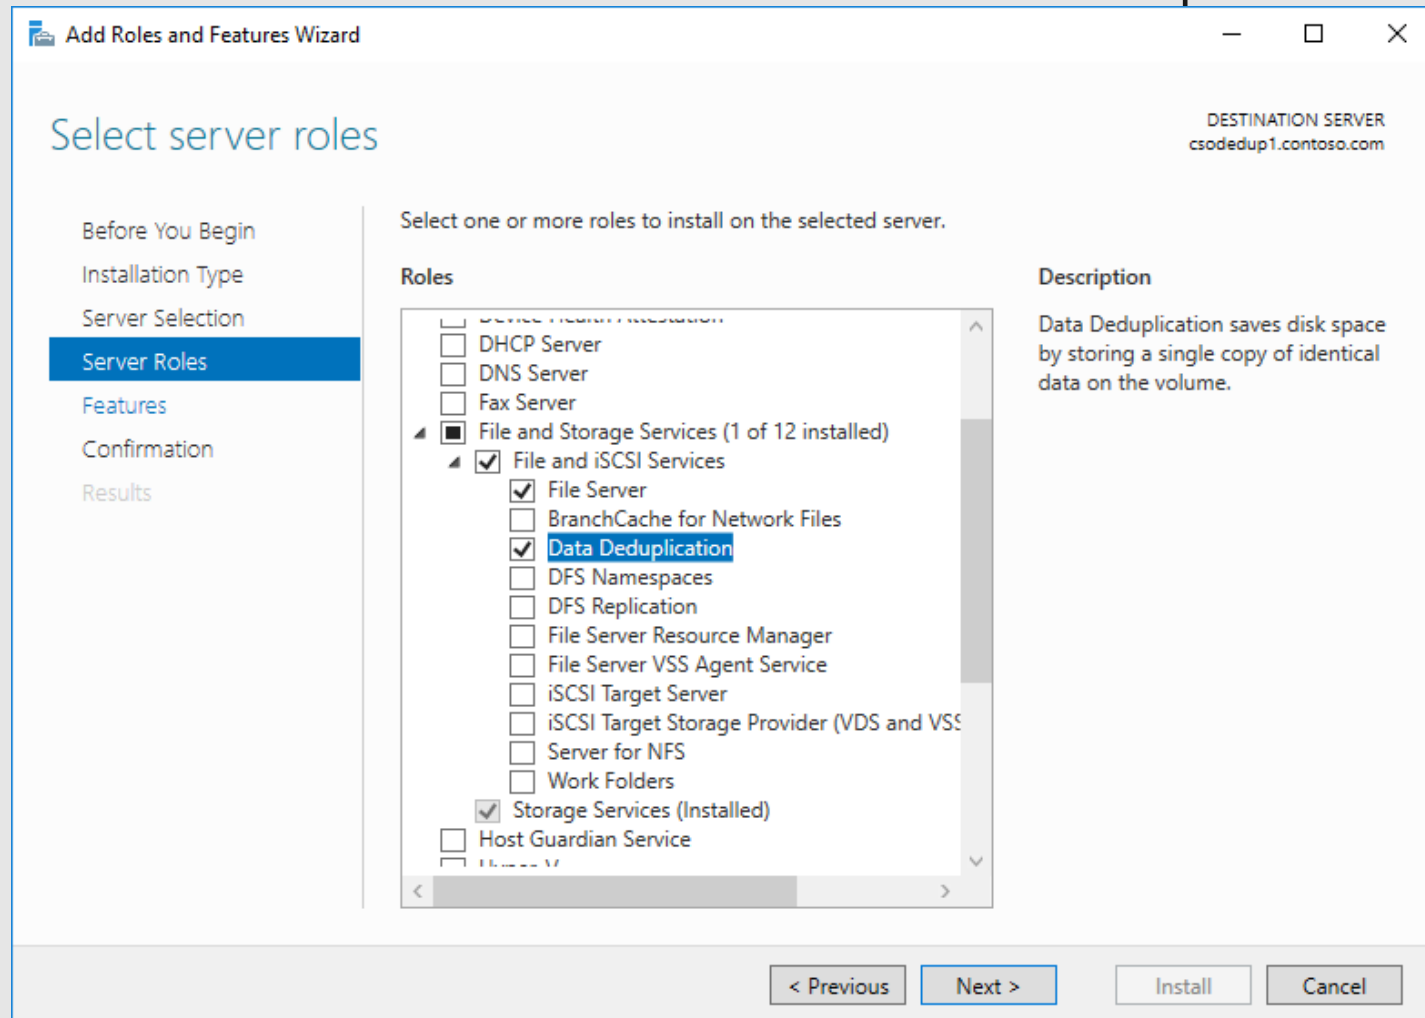

#5 – Replace the original file with a reparse point to the chunk store

#6 – Files are read via the Deduplication Filter Driver dedup.sys

Installing Deduplication in Windows Server 2019

- Install-WindowsFeature -Name FS-Data-Deduplication

Traditional Infrastructure

Hyper-Converged Infrastructure (HCI)

Unprecedented hyper-converged infrastructure

Evolve your datacenter infrastructure to achieve
greater efficiency and security

Windows Admin Center management
Best for two-node HCI at the edge
Industry-leading performance and scale
Storage Class Memory support

Enhanced security capabilities

Elevate your security posture by protecting the datacenter starting with the operating system

Shielded VMs for Linux
Integrated Windows Defender ATP
Exploit Guard
System Guard Runtime

Windows Server 2016

Initial launch of containers
Process and Hyper-V isolation
Docker EE Basic Included at no additional cost

Windows Server, version 1709

Optimized container images for Nano Server and Server Core
Platform level support for Linux containers
Windows Subsystem for Linux
Networking enhancements for overlays and SDN

Windows Server, version 1803

Optimized Server Core image
App compat improvements
Native command line tools—curl.exe, tar.exe and SSH
Enhancements to the Windows Subsystem for Linux
Networking enhancements for greater density and quicker endpoint creation
Improved network security with Calico Open source storage plugins for Kubernetes
Platform functionality required for Kubernetes conformance

Windows Server 2019

Optimized Server Core image
App compat improvements
Enhanced Group Managed Service Account support
Platform functionality for Kubernetes and Microsoft Service Fabric
Performance and density improvements
Platform and open source work on CNI networking plugins such as Calico and Flannel
Enhancements to the Windows Subsystem for Linux
...you will have to wait

Application Innovation

Faster innovation for applications

Enable developers and IT pros to create cloud native, modernize their traditional apps using containers and micro-services

Service Fabric & Kubernetes for container orchestration

Windows Subsystem for Linux

Optimized Images for Server Core and Nano Server

SQL Server 2019 Preview

1. Harness the power of big data

Big data clusters with scalable compute and storage composed of SQL Server, Spark, and HDFS. Cache data in scale-out data marts.

2. Bring AI to your workloads

A complete AI platform to train and operationalize models in SQL Server ML Services or Spark ML using Azure Data Studio notebooks.

3. Eliminate the need for data movement

Data virtualization allows queries across relational and non-relational data without movement or replication.

4. Explore and interact with visual data

Visual data exploration and interactive analysis using SQL Server BI tools and Power BI Report Server.

5. Run real-time analytics on operational data

In-memory technologies for analytics on operational data using HTAP. Higher concurrency and scale through persistent memory.

6. Automatically tune SQL Server

Intelligent Query Processing improves scaling of queries and Automatic Plan Correction resolves performance problems.

7. Reduce database maintenance and increase business uptime

Greater uptime with more online indexing operations. Now run Always On availability groups on containers using Kubernetes.

8. Boost security and protect data in use

SQL Server enables layers of security including protection of computations in Always Encrypted secure enclaves.

9. Track compliance with sophisticated resources

Data Discovery & Classification labeling for GDPR and Vulnerability Assessment tool to track compliance.

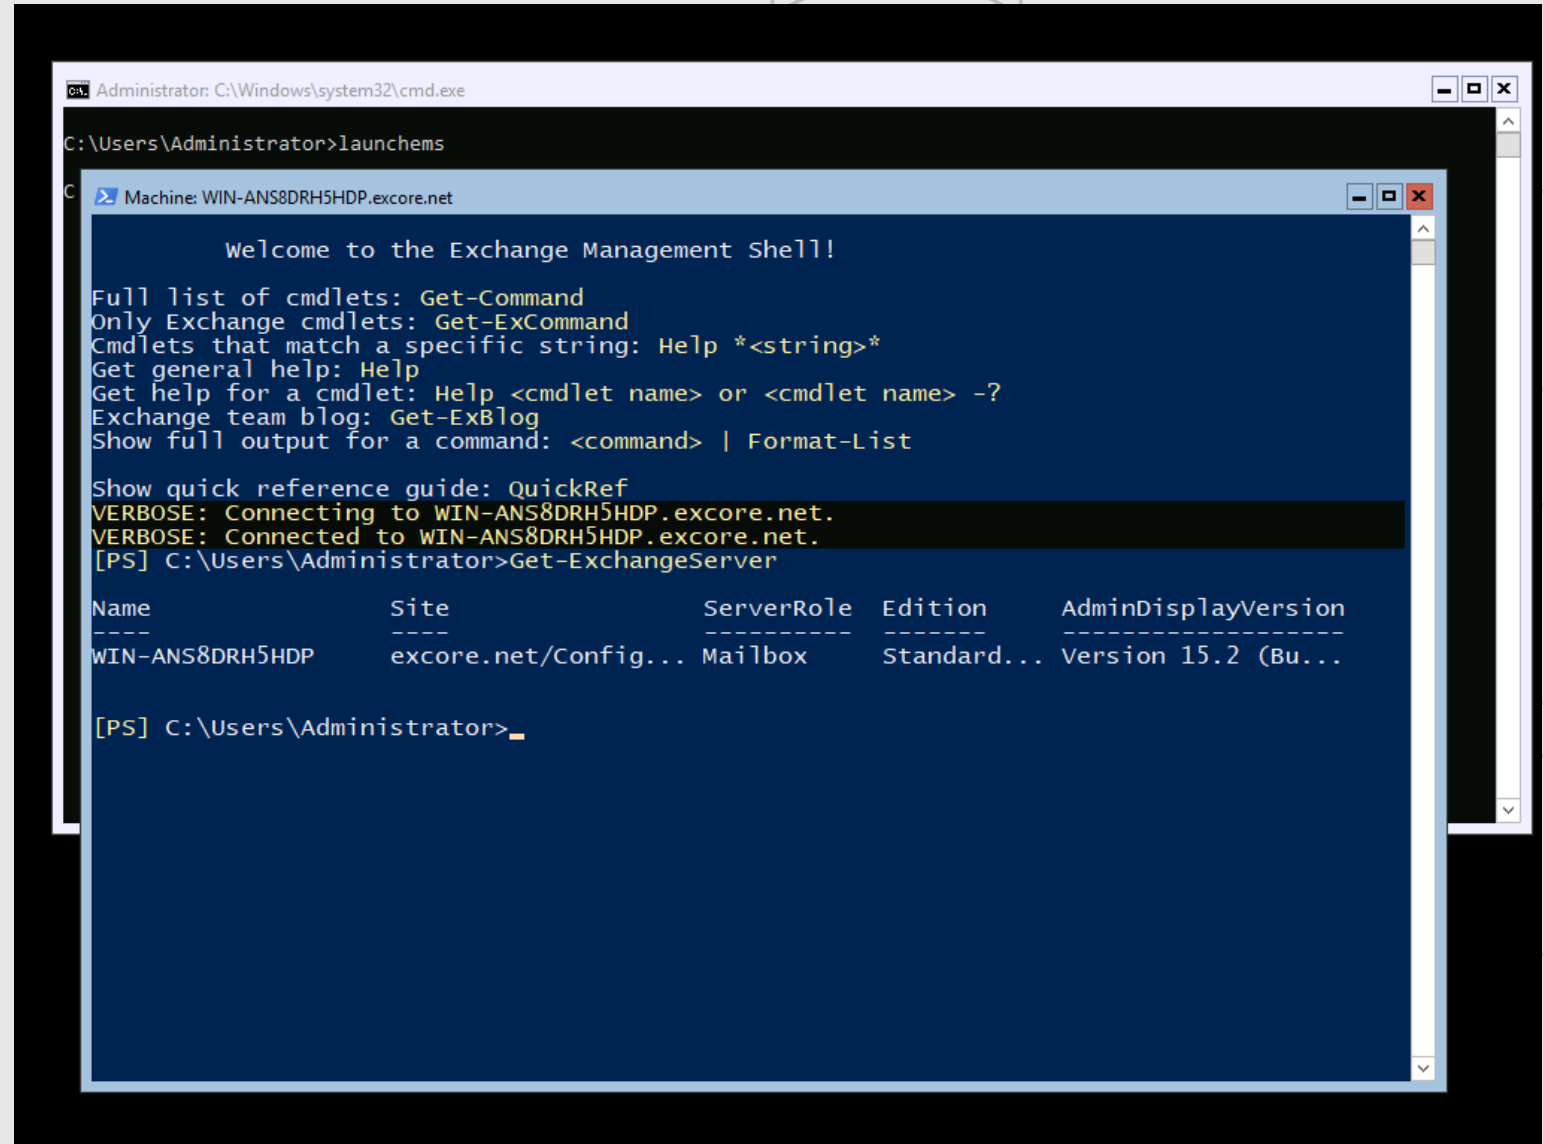

10. Optimize with choice and flexibility

Support for your choice of Windows, Linux, and containers. Run Java code on SQL Server and store and analyze graph data.

Exchange Server 2019 Preview

Now supported in Server Core!

The screenshot shows a Windows command prompt window titled "Administrator: C:\Windows\system32\cmd.exe". The user has entered the command `launchems`. A new window titled "Machine: WIN-ANS8DRH5HDP.excore.net" has opened, displaying the Exchange Management Shell (EMS) interface. The EMS window has a dark blue background and white text. It displays a welcome message and a list of cmdlets. The user has entered the command `Get-ExchangeServer`, and the output shows a table of Exchange servers.

```
Administrator: C:\Windows\system32\cmd.exe
C:\Users\Administrator>launchems
Machine: WIN-ANS8DRH5HDP.excore.net

Welcome to the Exchange Management Shell!

Full list of cmdlets: Get-Command
Only Exchange cmdlets: Get-ExCommand
Cmdlets that match a specific string: Help *<string>*
Get general help: Help
Get help for a cmdlet: Help <cmdlet name> or <cmdlet name> -?
Exchange team blog: Get-ExBlog
Show full output for a command: <command> | Format-List

Show quick reference guide: QuickRef
